Outcomes for CS Students About to Graduate

Students who have completed the computer science BS program at BSU should have the following abilities

• (a) An ability to apply knowledge of computing and mathematics appropriate to the discipline

• (b) An ability to analyze a problem, and identify and define the computing requirements appropriate to its solution

• (c) An ability to design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs

• (d) An ability to function effectively on teams to accomplish a common goal

• (e) An understanding of professional, ethical, legal, security and social issues and responsibilities

• (f) An ability to communicate effectively with a range of audiences

• (g) An ability to analyze the local and global impact of computing on individuals, organizations, and society

• (h) Recognition of the need for and an ability to engage in continuing professional development

• (i) An ability to use current techniques, skills, and tools necessary for computing practice.

• (j) An ability to apply mathematical foundations, algorithmic principles, and computer science theory in the modeling and design of compute r-based systems in a way that demonstrates comprehension of the tradeoffs involved in design choices.

• (k) An ability to apply design and development principles in the construction of software systems of varying complexity.
